The Town of Oakland is pleased to announce that **JAMES PEST MANAGEMENT** has been employed to handle our Mosquito Abatement Program utilizing EPA-registered products.

Here are some helpful tips for controlling mosquito breeding on your property, which will make the overall effort that much more effective.

-  1. Dump out buckets, cans, vases, flowerpots.
-  3. Clean out gutters to keep water from collecting.
-  5. Keep ditches clean & cleared so water flows away.
-  7. Patch holes in screens to keep Mosquitoes out
-  2. Empty wading pools at least once a week.
-  4. Fill in places in your yard where water collects
-  6. Remove water from old tires.
-  8. Cut grass and trim bushes to limit resting places.

And when going outdoors, here are some ways that you can help protect your family from the threat of disease that mosquitoes present.

- 1.) When outdoors, wear an insect repellent, preferably one containing DEET.
- 2.) Outdoor clothing impregnated with Permethrin repels Mosquitoes.
- 3.) Wear long pants and long sleeves outdoors when possible.
- 4.) Wearing light-colored clothing confuses mosquitoes
- 5.) Avoid becoming over-heated. Mosquitoes are drawn to higher temperatures and increased CO<sub>2</sub> output.
- 6.) When possible, plan to do strenuous outdoor activities during the windiest conditions when mosquitoes do not like to fly.
